Here is a testimonial on our success with the Crest Clamshell Press we purchased from you.

About 4 years ago we were spending upwards of \$30,000.00 on outside services to cut ABS plastic. This was just the labor component as we were supplying the material. We decided to pursue cutting our own plastic. We took our largest, most difficult "high volume" part and had a steel rule die made. We then cut up some blanks of .118 ABS, located 3 major brands (Standard, Thomson and Weidhaas / My Press Needs), and sent our die and plastic out for testing. This was going to be our biggest equipment purchase to date and we needed to due adequate testing.

After seeing the results, or lack of ability reported from other manufacturers, the Weidhaas / My Press Needs "Crest" series proved able to handle the demand. We're using the clamshell in a non-traditional way, asking it to cut .118 and .093 ABS as well as other plastics.

Shortly after our purchase, we increased our demand significantly which allowed the ROI on the Crest to be just under 12 months. The machine is still a focal point during customer tours, and continues to power through with excellent results.

Sincerely,

Craig Koloske  
Director, Manufacturing
